- Anti-tamper fixings
- Surface or flush mount in 35 mm double gang back box (not supplied)

CUSTOMISED PANELS AVAILABLE ON REQUEST

DESCRIPTION

Beacon reset units combine the function of alarm beacon and reset point into a single unit.

Units are usually mounted on a wall outside the toilets to attract attention in the event of an alarm and to allow operators to reset the alarm.

The brush finished stainless steel vandal resistant fascia is fitted with a vandal resistant reset button or a keyed reset switch to prevent reset by unauthorised persons.

Reset buttons or keyed switches must be held for at least 0.25 seconds to reduce the risk of an accidental alarm reset.

These units can be mounted in double gang 35 mm flush or surface back boxes (not supplied).

Folknoll equipment can be customised to suit your application. Alternative annotation and panel designs are available on request.

NOTE: Folknoll disabled toilets alarms cannot be reset remotely ensuring operators visit the toilet area in response to an alarm.

PART NUMBERS

DT7540.06

Beacon reset unit, stainless steel
