- **Can be looped together for larger systems**
- **Outputs for BMS and other third party systems**
- **Compatible with monitored alarms systems**
- **Can be supplied in fully enclosed wall mounting enclosure, with or without battery backed PSU**

DISABLED TOILET ALARMS

Folknoll's vandal resistant BS8300 compliant disabled toilet alarm system provides cost-effective solutions built from standard and bespoke units. Our toilet alarms can be combined with disabled refuge EVC, fire telephone and other systems. Ideal for shops, offices, hotels and other public spaces.

DT7550.82 CONTROLLER IO 16-ZONE

The DT7550.82 Controller IO 16-Zone monitors up to 16-off toilet alarms. If an alarm or other event is detected the unit activates local sounders, beacons etc. and reports the event to remote (central) monitoring stations.

This device can be used as a cost-effective “alarm concentrator” for a floor or other area linking back to the main system over RS485 or IP. Reducing cabling requirements, installation costs etc.

Controllers can be networked together to provide monitoring for up to 64-off individual toilet alarms.

DT7550.82 units are usually supplied in fully enclosed surface mount enclosures, battery backed system PSUs or rack mount enclosures, depending on site configuration. Other enclosures are available on request.

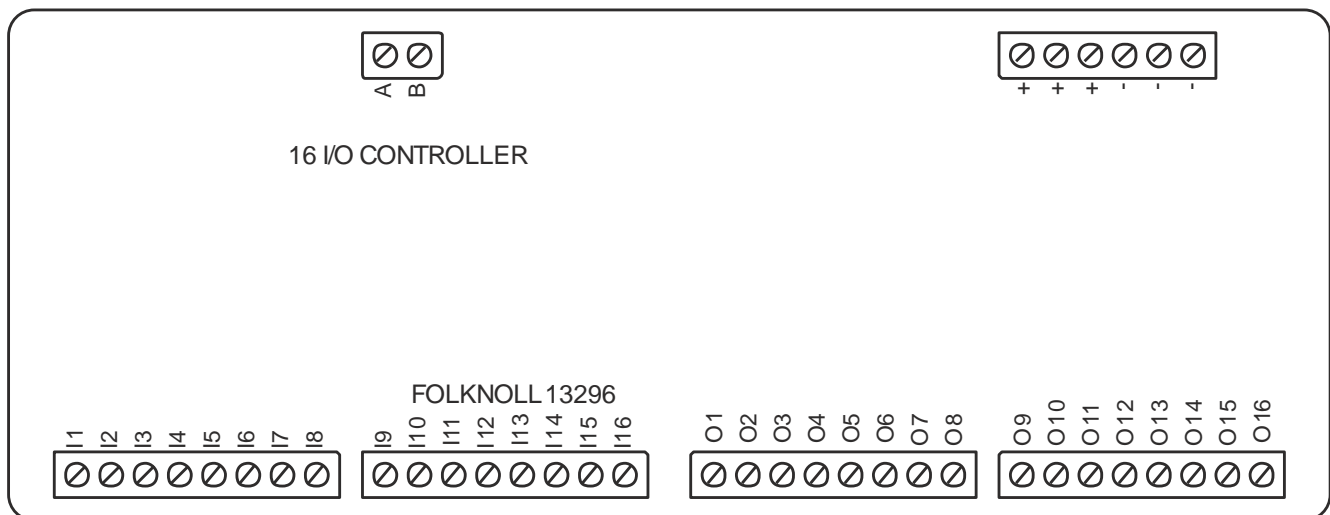

Folknoll offer a range of indicator panels, graphical workstations and event logs for use with disabled toilet alarm systems. Custom indicator panels are available on request.

SPECIFICATIONS

Enclosure: Wall or rack mounting, grey painted mild steel, with or without battery backed PSU as required
 IO: 16 alarm inputs, 16 alarm outputs
 Power: 12/24 Vdc (Supplied by battery backed system PSU or local PSU)
